Introduction

Knee pain is one of the most debilitating conditions people face. It affects your ability to walk, climb stairs, get up from a chair, or even sleep comfortably. Whether you are a young professional with a sports injury, a middle-aged adult with arthritis, or a senior citizen recovering from knee replacement surgery, knee pain can bring your daily life to a standstill.

What if world-class physiotherapy care could come to **you**, without you having to brave Hyderabad's traffic in pain?

Flexo Physiotherapy makes that possible. Our Senior Physiotherapist **Dr. Bhanu Vemula** provides professional, evidence-based knee pain physiotherapy directly at your home — anywhere in Hyderabad. No waiting rooms. No travel. Just focused, one-on-one care.

What Causes Knee Pain? Understanding the Root Cause

Dr. Bhanu Vemula, Senior Physiotherapist at Flexo Physiotherapy, explains that knee pain has many causes and must be diagnosed accurately before treatment begins. The most common causes he sees in Hyderabad patients include:

Injury-Related Causes

- **Ligament tears** – ACL, MCL, or PCL tears (common in active people and athletes)
- **Meniscus tear** – Damage to the cartilage cushion in the knee joint
- **Patellar tendinitis** – Inflammation of the tendon connecting the kneecap to the shinbone
- **IT Band Syndrome** – A common runner's injury causing outer knee pain

Degenerative and Age-Related Causes

- **Osteoarthritis of the knee** – The most common form, where cartilage gradually wears away
- **Rheumatoid Arthritis** – An autoimmune condition causing joint inflammation
- **Post-knee replacement recovery** – Pain and stiffness following total or partial knee replacement surgery

Structural and Postural Causes

- **Flat feet (Pes Planus)** – Improper foot arch causing knee misalignment
- **Obesity** – Excess weight puts 3–4x more pressure on knee joints
- **Weakness in surrounding muscles** – Weak quadriceps, hamstrings, or hip muscles leading to knee instability

Why Physiotherapy Works Better Than Painkillers for Knee Pain

Pain medications and anti-inflammatory drugs can reduce symptoms temporarily — but they do not rebuild cartilage, strengthen muscles, or restore joint mechanics. Long-term reliance on medications also carries risks for liver, kidney, and stomach health.

Physiotherapy treats what medications cannot:

- Rebuilds strength in the muscles that support the knee
 - Restores the normal movement and alignment of the joint
 - Reduces inflammation naturally through targeted therapy
 - Prevents further degeneration and the need for surgery (in many cases)
 - Speeds up recovery after knee surgery
-

How Dr. Bhanu Vemula Treats Knee Pain at Your Home

At Flexo Physiotherapy, every patient receives a personalised treatment plan. Here's what Dr. Bhanu Vemula's home physiotherapy for knee pain typically includes:

1. Detailed Assessment and Diagnosis

Before any treatment begins, Dr. Bhanu Vemula conducts a thorough physical assessment at your home evaluating your posture, gait, knee range of motion, muscle strength, swelling, and medical reports (X-rays, MRI scans if available). This ensures the treatment plan is precise and safe.

2. Manual Therapy and Knee Joint Mobilisation

Using carefully applied hands-on techniques, Dr. Bhanu Vemula mobilises the knee joint to restore movement, reduce stiffness, and provide immediate pain relief. This is especially effective for osteoarthritis, post-surgery recovery, and meniscus problems.

3. Electrotherapy Treatment at Home

Our home physiotherapy service includes professional-grade electrotherapy equipment:

- **IFT (Interferential Therapy)** – Deep pain relief and reduction of knee swelling
- **TENS** – Effective pain management without medication
- **Ultrasound Therapy** – Accelerates healing of soft tissue damage, ligament injuries, and tendinitis, osteoarthritis

4. Therapeutic Exercises for Knee Strengthening

A customised exercise programme is designed for your specific knee condition, focusing on:

- Quadriceps and hamstring strengthening
- Hip abductor strengthening (critical for knee alignment)
- Balance and proprioception training
- Gradual range of motion restoration

5. Kinesio Taping

Sports taping or kinesio taping techniques can support the kneecap, reduce swelling, and allow patients to move more comfortably between sessions.

6. Gait and Posture Retraining

Dr. Bhanu Vemula observes how you walk and identifies patterns that are overloading your knee. Correcting your gait and standing posture reduces pain dramatically and prevents recurrence.

6 Safe Physiotherapy Exercises for Knee Pain at Home

 **Important:** These exercises are general recommendations. Patients with knee replacement, ACL tears, or severe arthritis should only exercise under the direct supervision of Dr. Bhanu Vemula. Do not start exercises if your knee is significantly swollen or acutely inflamed.

Exercise 1: Straight Leg Raise

Target: Quadriceps strengthening without stressing the knee joint

How to do it:

1. Lie flat on your back
2. Keep one leg bent with foot flat on the floor
3. Keep the other leg straight and raise it to 45 degrees
4. Hold for 5 seconds, then lower slowly
5. Repeat 10–15 times per leg, 2–3 sets

Exercise 2: Seated Knee Extension

Target: Strengthening the quadriceps muscle

How to do it:

1. Sit on a sturdy chair
2. Slowly straighten your knee until your leg is parallel to the floor
3. Hold for 5 seconds, then lower slowly
4. Repeat 10–15 times per leg

Exercise 3: Short Arc Quads

Target: Gentle quadriceps activation great for post-surgery recovery

How to do it:

1. Lie on your back with a rolled towel under your knee (raising it slightly)
2. Straighten your knee by tightening your thigh muscle

3. Hold for 5 seconds, then lower
4. Repeat 10–15 times

Exercise 4: Heel Slides

Target: Improving knee flexion (bending) gently

How to do it:

1. Lie on your back
2. Slowly slide your heel toward your buttocks, bending the knee
3. Go as far as comfortable without pain
4. Hold for 5 seconds, then slide back
5. Repeat 10–15 times per leg

Exercise 5: Calf Raises

Target: Lower leg strengthening and improving knee stability

How to do it:

1. Stand behind a chair, holding the back for balance
2. Slowly rise up on your toes
3. Hold for 2–3 seconds, then lower
4. Repeat 15–20 times

Exercise 6: Side-Lying Leg Raise (Hip Abduction)

Target: Strengthens hip muscles that support knee alignment

How to do it:

1. Lie on your side with legs stacked
2. Slowly raise the top leg to 45 degrees
3. Hold for 3 seconds, then lower
4. Repeat 10–15 times per side

Physiotherapy for Knee Replacement Recovery at Home

If you or your loved one has recently undergone total knee replacement (TKR) surgery, **starting physiotherapy within the first few days after surgery is critical** for a successful recovery.

Dr. Bhanu Vemula's post-knee replacement home physiotherapy programme follows a structured, week-by-week protocol:

Recovery Phase	Timeline	Goals
Early Phase	Week 1	Reduce swelling, prevent blood clots, begin gentle movement
Intermediate Phase	Week 2–3	Restore range of motion, begin walking training
Strengthening Phase	Week 3–5	Build muscle strength, improve balance
Return to Function	Month 2–4	Full daily activities, stairs, and independence

Home physiotherapy is **especially vital** for knee replacement patients because travelling to a clinic in the early weeks is painful and risky. Dr. Bhanu Vemula comes to you making your recovery safer and more comfortable.

Why Choose Flexo Physiotherapy for Knee Pain in Hyderabad?

Meet Dr. Bhanu Vemula – Senior Physiotherapist, Flexo Physiotherapy

Dr. Bhanu Vemula brings senior-level expertise and a compassionate, patient-first approach to every home visit. With deep experience in treating knee conditions ranging from sports injuries to post-surgical rehabilitation and geriatric arthritis, he has helped patients across Hyderabad regain their mobility and quality of life.

His philosophy: *"Every patient is different. A 25-year-old with a sports injury and a 70-year-old with knee replacement have entirely different needs. Our job is to create a plan that works for that specific person, not a generic protocol."*

Flexo Physiotherapy Home Service: Key Advantages

Patient Stories

Jagadeesh Reddy

We have contacted physiotherapy treatment for my father's knee surgery for 10 days. Whatever treatment provided it was very good and helpful recovery very fast. The therapist was professional, patient, and extremely knowledgeable. He used to provide valuable suggestions to recover fast.

We are very happy about the treatment. Highly recommended for anyone looking for knee surgery and treatment physiotherapy at home. Thank you once again.

Praveen Pandey

I consulted Dr. Bhanu for my mother's knee replacement surgery. We were very satisfied with his treatment. He is very professional, knowledgeable, and caring, and he

explained everything clearly which gave us a lot of confidence. The surgery and overall care were handled very smoothly.

Frequently Asked Questions about Knee Pain Physiotherapy

How many sessions of physiotherapy are needed for knee pain?

For mild to moderate knee pain (early arthritis, tendinitis), **6–10 sessions** often produce significant improvement. For knee replacement recovery, a full programme of **12–20 sessions** over 1-2 months is recommended.

Can physiotherapy cure knee arthritis?

Physiotherapy cannot reverse the structural changes of arthritis, but it can **dramatically reduce pain, improve function, and slow progression** often eliminating or delaying the need for surgery.

Is home physiotherapy effective for knee replacement recovery?

Yes, and in many ways it is superior for post-surgical patients. Travelling in the early weeks carries risks. Home physiotherapy means treatment begins earlier, which leads to faster recovery.

Can physiotherapy help me avoid knee surgery?

For conditions like early-to-moderate osteoarthritis, meniscus irritation, and knee tendinitis, physiotherapy is often successful in avoiding or delaying surgery. Dr. Bhanu Vemula will give an honest assessment of whether surgery can be avoided in your case.

What should I wear during a home physiotherapy session?

Comfortable, loose clothing that allows easy access to the knee shorts or trackpants work best.

Do you provide physiotherapy for both knees?

Yes, we treat both knees in the same session when required, at no extra charge for the dual assessment.

Book Your Knee Pain Home Physiotherapy Session

Don't let knee pain limit what you can do. Whether it is walking your child to school, climbing stairs to your own home, or simply getting up from the floor you deserve to move freely.
